## Summary

As a 19yo Frontend Developer with 4 years of experience in an international company, I focus on building responsive, high-performance features that enhance both user experience (UX) and developer experience (DX). I'm skilled at developing designs that align with company goals, ensuring a seamless and engaging interactive experience. With leadership and mentorship experience, I am dedicated to helping teams create scalable, maintainable applications that drive business growth.

## Experiences

### PANTOhealth | Front-End Chapter Lead

Sep 2023 - Current

- Mentored and coached a team of five developers, focusing on skill development and delivering consistent, high-quality results.
- Designed and implemented a structured framework for team workflows and project management to enhance efficiency.
- Conducted detailed code reviews to ensure task quality and foster continuous improvement among team members.
- Managed production releases, handling deployment processes with precision to ensure seamless delivery.
- Organized and led knowledge-sharing sessions to introduce advanced techniques and promote team collaboration.

### PANTOhealth | Front-End Developer

Apr 2021 - Aug 2023

- Created a dynamic shapes and animations utilizing svg for data visualization.
- Collaborated closely with product designer to transform wireframes into pixel-perfect frontend interfaces.
- Developing and curating a dedicated components library utilizing React and Styled-components.
- Innovating the frontend landscape with tailored services, encompassing a proprietary HTTP request system, dynamic notifications, efficient lazy loading, seamless handling of large datasets, and a personalized touch to video playback through a custom video player.
- Employing moment.js to localize timestamps while designing a unique calendar box solution.
- Developing a tailored railway map with distinctive features catered to enhance the experience for our valued customers.

## Projects

### Chat AI

Demo | Code

- A modern chatbot inspired by ChatGPT, built with Next.js, TypeScript, Zustand, and TailwindCSS.
- Added prompt refresh, file attachments, and API response rendering (images, code, lists).
- Developed user/system role-based interactions.
- Built typing animation and loading shine effects for better UX.
- Designed responsive layouts for mobile and desktop.
- Implemented search box and "Explore GPTs" feature.
- Created a customizable settings modal.
- Delivered a seamless and interactive user experience.

### Trade Journaling

Demo | Code

- An online journaling and analytics system for traders, built with Next.js, TypeScript, ShadCN, TailwindCSS, and ECharts.
- Developed complex data visualizations with ECharts and a reports dashboard for analyzing user data.
- Created a positions management page with table views and functionality to define base variables.
- Designed and implemented login, signup, and contact support forms.
- Delivered a responsive, user-friendly interface for seamless desktop and mobile experiences.
